Daniel Remick M.D.
Chair and Professor
Department of Pathology and Laboratory Medicine
Boston University School of Medicine
Boston, MA

Mechanisms of Traumatic Brain Injury Augmenting Clearance of Bacteria

Dr. Remick is Chair of the Department of Pathology and Laboratory Medicine at Boston University School of Medicine. Dr. Remick received his M.D. from Mayo Medical School and performed his Pathology residency and Immunopathology fellowship at the University of Michigan. He remained at the University of Michigan to begin his academic and research career, and rose to the rank of Professor of Pathology in 1998. In 2006, Dr. Remick was recruited to Boston University School of Medicine as Chair of Pathology. For many years, his laboratory has studied inflammatory responses after sepsis or trauma, as well as in asthma. He has published extensively on the pathogenesis of sepsis/trauma using clinically relevant murine models, and has provided important insights into the cytokine response after sepsis and trauma, as well as the mechanism of injury to specific organs. In addition to his research contributions, Dr. Remick is active nationally serving on multiple study sections and editorial boards. He is also past president of the Shock Society and the American Society of Investigative Pathology, and has made key contributions to the Society for Leukocyte Biology and the Association of Pathology Chairs.
